

## INTERVIEW #2 (GP)

00:00

**Pirasana:** Okay so the game is, we have a grid of 8 by 8, it's going to be like this [draws the field quickly] I'm trying to draw it well... but it's just to explain at the beginning.

**Participant:** Ok

**Pirasana:** let's say I drew it's an 8 by 8 grid here... so you have... uh. The first player has this symbol that he will use [draws an empty point on the side] and the other will have this as his symbol [draws an filled point on the side]

**Participant:** OK

**Pirasana:** the goal of the game is to... at each of our turns we put a point at the intersections of the grid... uh.. And to build polygons so the options we have are like triangles, a simple triangle, square, a diamond or a hexagon if you are able to make a hexagon.. if we are able.

**Participant:** OK

**Pirasana:** and the first two, triangle and square, it's two points...euhh... Diamond is four points, hexagon is six points

**Participant:** Ok

**Pirasana:** and... uh and after that there's a trick, a way to penalize your opponent. It's like if I decide to draw a square and I managed to draw three points **[draws three filled points at different intersection \*screenshot1\*]** and then if you think I'm going to put it here **[points to the intersection \*screenshot2\*]**, you can put your point there to block me. And if I decide to draw the square anyway, instead of having two points, I'm going to have one point because of your point in the way. **[draws the empty point of the opponent as an example and draws the square including it \*screenshot3\*]**

**Screenshot1**

**Screenshot2**

### Screenshot3

**Participant:** Oh ok ok

**Pirasana:** Or rather, sorry if it was a triangle, let's say if I want to make a triangle **[draws two filled dots \*screenshot4\*]**, and I just had to do this **[points to the intersection where if we put a dot, we can draw a triangle]** to complete it. So if you put a point here **[draws opponent's point in an intersection where the triangle side would touch it but its not the vertex of the triangle \*screenshot5\*]**, and I decide to make the triangle **[draws the third vertex of the triangle and completes it with the opponent's point in the middle \*screenshot6\*]** your point is in the intersection of the sides of the triangle, so it's two minus one for me.

**Screenshot4**

**Screenshot5**

**Screenshot6**

**Participant:** Ok

**Pirasana:** But here I wouldn't to complete the square [points to the square drawn before that has the opponents empty dot as a vertex]

**Participant:** Okay

**Pirasana:** Uh... Do you have any questions?

**Participant:** No, it's okay.

**Pirasana:** It's okay?

**Participant:** yes

**Pirasana:** Okay

**02 :19**

**Participant:** So do you want to be the empty or full point?

**Participant:** Ah, I'm going to be the empty one.

**Pirasana:** Empty?

**Participant:** yes

**Pirasana:** Ok I'll do the grid... hopefully it works [**draws the grid**]. Okay, do you want to start?

**Participant:** Hm okay

**Pirasana:** If you want

**Participant:** Ok yes. Can I put anywhere?

**Pirasana:** Anywhere including borders

**03 :58**

**Participant:** Okay [**draws an empty point**]

04:04

Pirasana: Okay **[draws a solid point]**. Oh by the way, whoever has 10 points first wins.

04:12

Participant: Oh okay **[draw empty dot]**

04:17

Pirasana: Hmm [draws solid point]

04:22

Participant: [Draws an empty point and is able to draw a triangle right away but doesn't, maybe because they didn't know they can draw right away]

04 :29

**Pirasana:** So I think you're going to make a triangle here so I'll put mine here [draws a filled point between two vertex of the triangle without realising/telling the opponent they could have drawn the triangle already]. So normally it's just one minus one, but you can always top it up.

04 :45

**Participant:** Oh okay [wanted to draw an empty point somewhere else but after I told them they could still finish their triangle but will get one point instead of 2 points, they complete the triangle]

**Pirasana:** that's if you were wanting to make a triangle

**Participant:** Oh okay yes

**04 :54**

**Pirasana:** Okay, oh what did I want to do?... Oh **[draws a solid point on the bottom side]**

**05 :02**

**Participant:** **[draws empty point]**

05:08

**Pirasana:** Okay here I'm going to do this **[draws solid point and completes a diamond]** so here I'm trying to make a diamond.

**Participant:** Ooh okay

**Pirasana:** Yes, it's a big diamond. So here you have one point**[writes "1" in the triangle]** and here I have four points**[writes "4" in the diamond shape]**.

**Participant:** Can we do the same thing or not? **[points to inside the diamond but not sure what they were asking here]**

**Pirasana:** Uh, not inside

**Participant:** not in okay.

**Pirasana:** But you can make squares, triangles, I remind you, mini squares too, you don't have to be tall.

05:34

**Participant:** Oh okay [draws an empty point in the top area]

**Pirasana:** And it shouldn't touch what we've already done.

**Participant:** Okay

05 :39

Pirasana: [Draws a solid point below the triangle]

Participant: Can it be joined? [points to the triangle and the diamond]

Pirasana: No, that's right, it can't be...

Participant: No? okay

Pirasana: yes looks like we've already taken up a lot of space...

05:50

Participant: Okay [draws empty dot next to the previous one, seemingly wanting to make a square]

05:58

Pirasana: Hmm [draws a solid point and getting closer to drawing a triangle]

06:03

Participant: [draws an empty point and most likely the third vertex of a square]

06:10

Pirasana: [draws a solid point and completes a triangle] A little triangle here.

06:15

**Participant:** [draws an empty point and finishes all vertexes of a square] Can I draw it now?

**Pirasana:** yes

**Participant:** Ok. [completes a square]

**Pirasana:** So two points here[pointing to the new small square] and two points here[pointing to the small triangle]. Then... It's my turn?

**Participant:** yes

06 :31

Pirasana: Oh its getting tighter [draws a solid point]

06 :44

Participant: [draws a solid point by accident and erases it and then draws an empty point]

06 :53

Pirasana: [Draws a solid point below the diamond]

06 :57

Participant: [Draws empty point above the diamond]

07:06

Pirasana: [draws solid dot] Oh I think I made a triangle here?

Participant: Hmm

07:09

Pirasana: yes ok. [completes a triangle] So, two points. So I'm at eight points

07:17

**Participant:** Oh okay [draws an empty dot and now has all the vertex to draw a triangle but they don't draw one]

07:29

**Pirasana:** And you have.. oh okay.. 3points..if you have completed a shape you can draw it... Okay here [draws a solid point on the right side between two triangles]

07:32

Participant: [draws an empty point and completes a diamond]

**Pirasana:** Okok, so here you have four points [writes "4" in the diamond they just completed]. Plus 4, you have 7 points, it's good. We said we're playing until we reach ten points?

**Participant:** Hmm mm

**Pirasana:** Or was it... twelve ?

**Participant:** oh

08:06

Pirasana: Okay no, we're going to keep it at ten as I said that before [draws a solid point at the top right]

08:16

Participant: [draws an empty point at the bottom]

08:26

Pirasana: Uh... I can't do anything?... oh I can [draws a solid point at the middle-right side, wanting to maybe draw a square]

08:35

Participant: [Draws an empty point close to and on top of the previous solid point, seemingly trying to block a way to draw a square]

08:42

Pirasana: Oh [draws a solid point in the same area, trying to complete the vertex of the bottom part of a square]

08:49

Participant: [draws an empty point, blocking opponent from drawing a square]

08:58

**Pirasana:** I made it too easy... uh... okay I have no idea so I'll just put... [draws a solid point on the right of the small diamond]

09:05

**Participant:** [draws an empty point at the very bottom on the left of the existing empty point]

09:19 (can't be seen on the original screenshot but here's the drawing with previous screenshot)

Pirasana: [draws solid point right down of the empty point that's on the right bottom]

09:23 (can't be seen in the og so drawn once again)

Participant: [draws empty point at the complete bottom on the left side of the previous solid point and starts to complete a square with the opponents point]

Pirasana: Oh no, you can't build with mine

Participant: Oh can't? Oh ok ok

Pirasana: But you have the right to build with my point if it's in the middle...IF it's in the middle of your points. [shows an example pointing to the triangle where the opponents point isn't a vertex of the shape]

Participant: Oh okayokay

Pirasana: [erases the lines drawn to make a square but keeps the last empty point they added] What did you add? This?

Participant: Uh, yes

Pirasana: Do you want to keep it there? or you can...

Participant: yes I'll keep it.

Pirasana: Oh yes? are you sure?

Participant: yes

09:58 (can't be seen in the og but drawn once again)

Pirasana: Okay. I'm going to put this in here [draws a solid point in the same bottom area]

10:07 (can't be seen in the og but drawn once again)

Participant: [draws an empty point next to the last point drawn]

Pirasana: I think you just finished a shape? unless you plan to do...

10:26 (drawn once again)

Participant: Oh [realizes and completes a triangle]

**Pirasana:** Was that your plan?

**Participant:** I didn't know if I was allowed to do it...

**Pirasana:** Oh yes, yes, you are allowed to draw but you just get one point instead of two. So now we're equal.  
[writes "8" next to the "7" to indicate both players have 8 points]

**Participant:** Ok

10:41

**Pirasana:** Uh [draws solid point below the small square on top]

10:50

Participant: [draws empty point between the small square and diamond on top]

10:57 (can't be seen in the og screenshot but drawn once again)

Pirasana: We play until we have filled the grid [draws a solid point at the bottom left below the triangle] or we reach 10 points.

**Participant:** Can I put there?

**Pirasana:** Hmm yes on the borders, you're allowed.

**11:19**

**Participant:** [draws an empty point on the top left border of the grid below the diamond]

**11:30**

**Pirasana:** Okay. [draws a solid point on the left border of grid on the bottom side]

11:39

Participant: [draws an empty point on the right of the last drawn solid point at the bottom left side]

11:43

Pirasana: Okay I'll do that anyway. [draws a solid point and completes a triangle on the bottom left] So I can still make a triangle but it's negative one, instead of two... I have a point. So I have here, 9. [writes "1" on the newly completed triangle and updates the score on the right side of the paper]

12:27

Participant: Hmm I'll try here [draws an empty point on top right corner of the grid]

12:43

Pirasana: I don't know. [draws solid point on the right side of the big diamond shape] I hope I see polygons randomly.

13:04

Participant: [draws an empty point at the top right, below the other empty point]

13:17

Pirasana: [draws a solid point below the small diamond and on the right of an empty point]

13:30

**Participant:** If I put it here, can I make a triangle or not? [points next to the small square]

**Pirasana:** Oh, yes, actually!

**Participant:** ok yes? okay

**Pirasana:** Oh shoot!

13:39

**Participant:** [draws an empty point at the intersection and complete a triangle with an solid point inside because there as no rules against it]

**Pirasana:** Oh yes because it doesn't normally touch...

**Participant:** Okay

**Pirasana:** Can you...? hm yes you can.

**Participant:** I can?

**13 :53**

**Pirasana:** yes, the solid point is on the inside, but I didn't say that it wouldn't count at the beginning, so it counts!

**Participant:** Okay yes!

**Pirasana:** Okay so you... then you win! So 10 points, you won. Okay so now, we're going to go to the little debriefing with the questions.

**Participant:** Okay

**Pirasana:** So how did you think about the game?

**Participant:** That's really interesting. I don't think there's a game like that that exists... uh yes and it makes you think a lot.

**Pirasana:** Oh okay, are there any suggestions? Anything you want that there isn't or that you want to add?

**Participant:** Hmm, I feel like if it was with color, it's going to be nice. Like after we did one of the.. Like if we make a square, if we color it, it's going to be nicer.

**Pirasana:** yes you're right. uh that's good and nothing else?

**Participant:** Nono otherwise it's..

**Pirasana:** Any other comments? nothing?

**Participant:** No

**Pirasana:** Okay! Thank you. Thank you for participating!
